

1 **What is claimed is:**

2 1. A plug inner frame comprising:

3 a frame in the form of a block; and

4 at least two blades securely held by the frame, each { of said at least
5 two } blades } including an enclosed section and an exposed section, each [of
6 said at least two } blades } including an end having a wire-receiving groove, a
7 neck being defined between said wire-receiving groove and said exposed
8 section, ^{each} said neck [of each of said at least two blades] being so twisted that
9 said wire-receiving grooves of said [at least two] blades face the same
10 direction.

11 2. The plug inner frame as claimed in claim 1, wherein { the } said exposed
12 section of each { of said at least two } blades } includes a wider front section
13 and a narrower rear section, said narrower rear section including a first
14 face and a second face opposite to said first face, a transverse through-hole
15 being defined in said narrower rear section and extending from said first
16 face through said second face, further comprising a reinforcing guide slot
17 defined in said narrower rear section and communicated ^{ing} with said
18 transverse through-hole, said reinforcing guide slot extending from said
19 first face through said second face of said narrower rear section.
